```
inheritanceChain = new Array();  
inheritanceChain[inheritanceChain.length] = typeObject.Constructor;  
typeBase = typeObject.BaseType;  
while (typeBase != null)  
{  
    if (!typeBase.IsLoaded()) typeBase.Load();  
    inheritanceChain[inheritanceChain.length] = typeBase.Constructor;  
    typeBase = typeBase.BaseType;  
}
```

```
Exbos.CreateObject = function(typeObject)  
{  
    var objectNew;  
    var typeBase;  
    var inheritanceChain;  
  
    try  
    {  
        if (typeof (typeObject) == "string")  
        {  
            typeObject = Exbos.GetType(typeObject);  
        }  
    }  
}
```

Cutting Edge, Cutting Costs

Why choose Exbos?

Our highly skilled developers can deliver code faster and to a higher standard than the industry norm. We specialise in developing efficient flexible web based systems. We employ methods that work to deliver systems that are high value, competitively priced and easy to use.

With skills and capability to take on even the most challenging of projects, we pride ourselves in being a team that are responsive, professional and always passionate about meeting the needs of our clients.

- **Highly Skilled**
- **Professional**
- **Experienced**
- **Prepared**
- **Competitive**
- **Agile**
- **Reliable**
- **Robust**
- **Resourceful**

```
objectNew = new Object();  
for (var iBaseIndex = inheritanceChain.length - 1; iBaseIndex >= 0; iBaseIndex--)  
{  
  inheritanceChain[iBaseIndex].apply(objectNew, Array.prototype.slice.call(arguments, 1));  
}
```

Research and Development

Our core evolving infrastructure underpins everything we do.

The quality of our work is influenced by talent, planning and efficient use of resources. We continuously study technology trends and calculate how to tailor our solutions to meet future needs. Our focus on constructing reusable high value resources has resulted in some of the most advanced tools and code libraries in the industry, built and maintained by our experienced developers.

Consequently, a high percentage of every project we undertake is made up of fully tested proven boiler plate code. This makes it easier to build new applications with higher specifications, in shorter timescales using significantly fewer new resources.

Our skills and libraries are visible in our growing range of Cloud based enterprise software services.

Exbos Applications in the Cloud

CommerceCloud

Content managed feature rich E-Commerce platform with automated SEO and email marketing tools.

PrintCloud

All the features of Commerce Cloud with focused print products and broker services enabling small print shops to compete with even their largest competitors.

VillaCloud

A premium villa lettings solution combined with all the features of Commerce Cloud to create a class leading offering to villa owners and holiday agents of all sizes.

DirectoryCloud

An advanced search optimisation tool enabling clients to enhance their market position through control of an industry wide directory of competitors.

Sometimes even the best “out of the box” functionality can’t match the needs of your organisation.

Our Bespoke Software Services

Exbos undertake customised application development ranging from very simple to highly complex projects.

We have a proven track record of delivery and a noted talent for quickly understanding client requirements. Our in house tools and libraries allow us to deliver fully documented enterprise

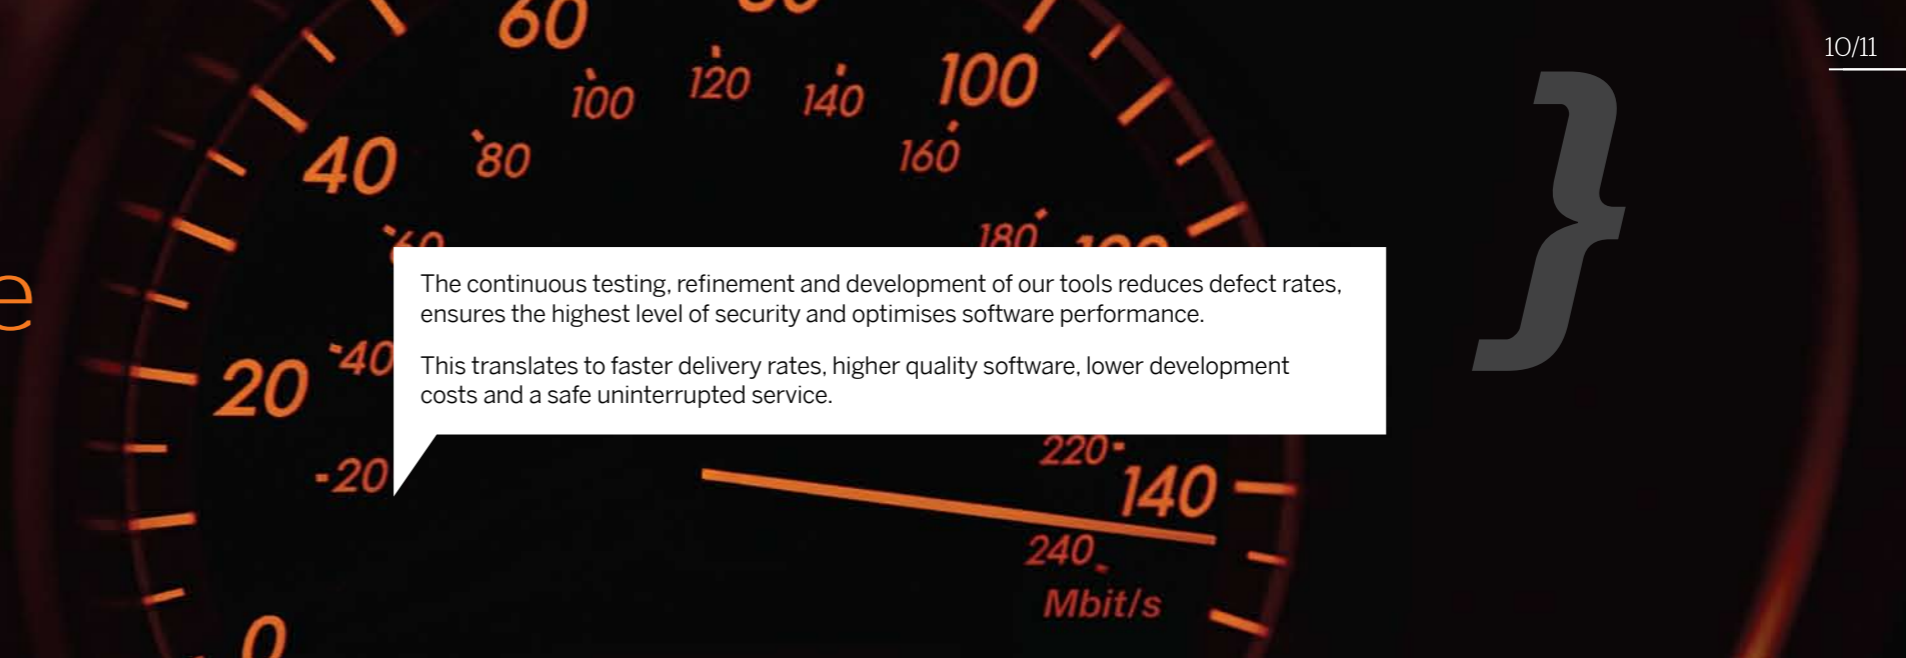

solutions. The outcome for clients is consistently fast, tailored and robust development that responds to their needs.

```
objectNew._type = typeObject;  
objectNew._objectId = Exbos._listObjects.length;  
Exbos._listObjects[Exbos._listObjects.length] = objectNew;  
Exbos._iTotalObjects++;  
return objectNew;
```

Software performance

The continuous testing, refinement and development of our tools reduces defect rates, ensures the highest level of security and optimises software performance.

This translates to faster delivery rates, higher quality software, lower development costs and a safe uninterrupted service.

```
catch (ex)
{
    throw Exbos.CreateObject("Exbos.Exception", -1, "Unable to create the object \\" +
        typeObject.Name + "\\", ex);
}
```

Pro—active Support

We don't believe in delivering walk away software prone to hackers and easily broken by future third party software updates, such as browser versions or the next Windows.

Producing secure, robust and reliable applications makes it easier for us to deliver comprehensive support for all our projects. Consequently we can offer very attractive pricing options covering all of your hosting, monitoring and support needs.

Cloud Software Specialists

Our company, Exbos was formed in 2007 by developers experienced in building highly secure, scalable and resilient web based systems within large organisations. We joined together to deliver the same calibre of architecture to small and medium sized enterprises constrained by fewer resources.

Employing the best people, using the best tools and applying the best practices has successfully opened access of enterprise grade software to all clients, regardless of their size. This means companies and organisations that previously were unable to consider high grade systems can expect and demand extra functionality, faster turnaround and better performance for the long term.
